

IFSO – NAC Symposium

Debate: When to use OAGB vs SADI

Napoli, IT
Sept 1, 2023

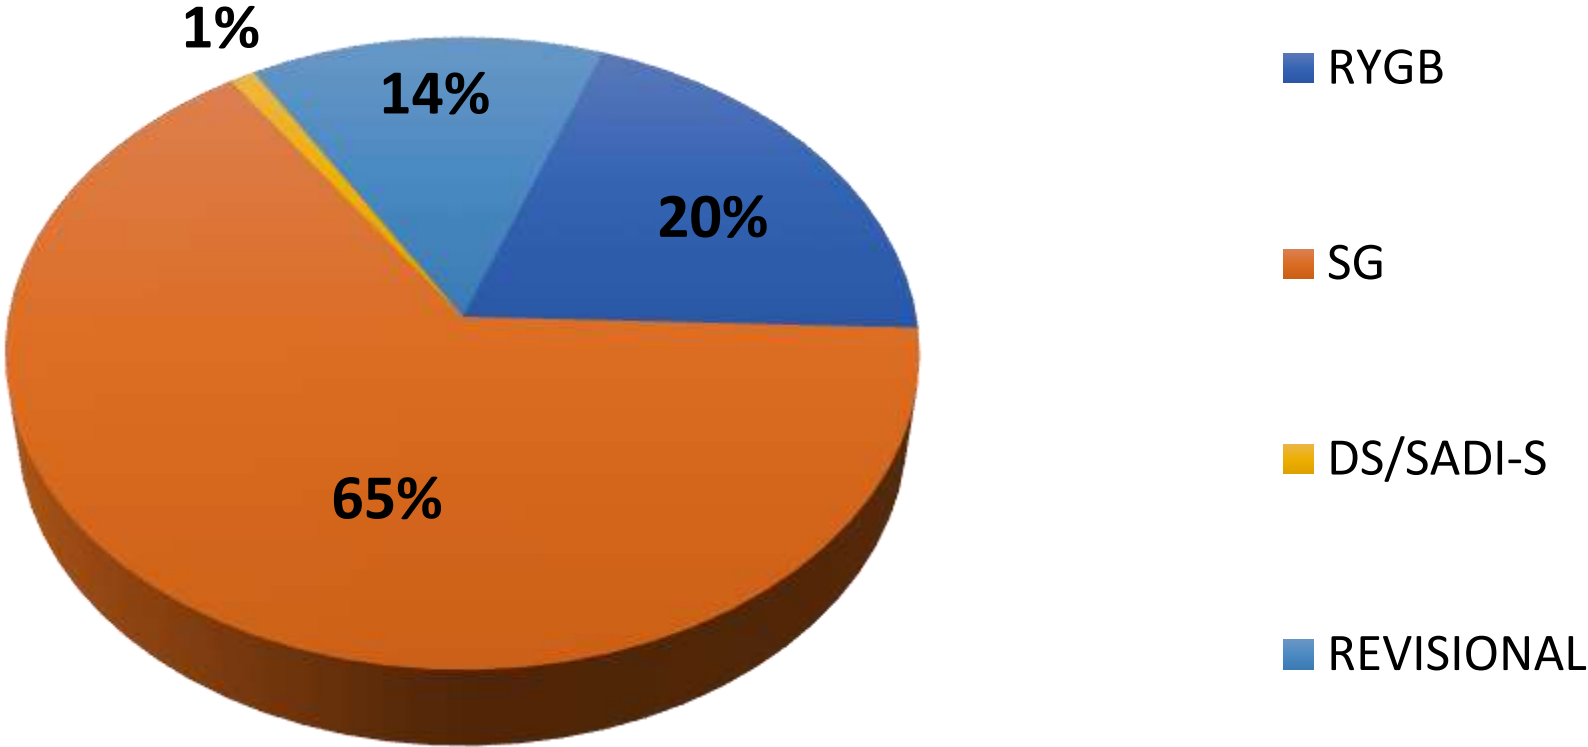

I have the following potential conflict(s) of interest to report:

Ann Rogers

- Intuitive Surgical - Speaker/Proctor
- WL Gore – Speaker/Proctor
- Medtronic - Speaker

Ninh Nguyen

- Olympus - Speaker
- Covidien – Speaker
- Endogastric Soutions- Speaker

(0% endoscopic and 0% OAGB)

45 year-old woman s/p sleeve gastrectomy 3 years prior. Initial 80 pound weight loss and improvement of hypertension and joint pain. Was able to stop 2 of 3 diabetes medications. Progressive regain of 55 pounds and need for more diabetes medications. Interested in further weight loss and resolution of diabetes.

History

- 38 year old male who underwent a sleeve gastrectomy for morbid obesity five years ago. Following his surgery he has persistent complaint of nausea and vomiting.
- PMH- cadaveric renal transplant, DVT

50 year-old man s/p open gastric bypass 20 years prior, at a BMI of 75. Initially lost half of his TBW (BMI 37). Lost his job, experienced progressive weight regain, now at BMI 71. Interested in once again experiencing significant weight loss. UGI shows a normal, intact gastric bypass. CT shows multiple midline hernias containing bowel.
