Message From Course Director

Obesity is a global concern. The World Health Organization predicts that by 2020, 1 Billion of the world population will be obese as defined by a body mass index of at least 30

Based on surgical techniques originating in the 1950, bariatric surgery has developed considerably and has increased in popularity in recent years. Procedures have traditionally been described as being either restrictive or malabsorptive but a greater understanding of the pathophysiology of obesity including the role of gut hormones has showed this to be a rather simplistic view of the various procedures. Use of minimally invasive techniques has increased significantly in recent years and is now recognized as standard practice worldwide

Surgery is now recognized as the only effective treatment for the morbidly obese patient with long term sustained weight loss and postoperative complete resolution or significant improvement in the obesity comorbidities. However this highly demanding and challenging surgical therapy necessitates the appropriate training and experience on the part of the surgeon. It is vital that the surgeon beyond the optimal theoretical knowledge also has the necessary technical skills in open and/or laparoscopic surgery performs meticulous pre- and postoperative care and is committed to long-term patient follow-up.

Moreover institutional commitment to the multidisciplinary care of the morbidly and super- obese patient who have an exceptional surgical and anesthetic risk is essential to ensure the safe and effective practice of bariatric surgery.

Bariatric surgeons like general surgeons in other subspecialty of surgery have been involved in the assessment of their own profession for many decades. In this era of evidence-based medicine pressure to improve the overall quality of care delivered is greater than ever.

In an effort to improve the quality of service offered to bariatric patients Badana Clinic in collaboration with King Hamad University Hospital Pleased to provide this specialized advanced workshop.
